

THE RADIOLOGY COACH

EDUCATION · CONSULTATION · TRANSFORMATION

The Radiology Coach provides expert **radiology training** and **advice to physicians, practice administrators, medical staff, and x-ray personnel**. This includes state certifications, clinical positioning and techniques, mA/kVp/pulse charts, equipment purchases, equipment maintenance, acquisition software training, image quality improvement, and RT CEU training. Our services are available online, over the phone, live consulting, and in open seminars.

"Greg and I have worked jointly with physicians for several years. His comprehensive background and knowledge of the industry is exceptional."

Gary Layton | CEO Layton X-Ray

TUNE IN

The Radiology Coach Podcast

As professional consultants, we are committed to providing the necessary guidance you need with your Radiology Department. We understand that purchasing imaging systems, achieving high quality x-rays, and training staff adequately can be frustrating, if not a nightmare. Gain confidence in managing your x-ray department. Let us save you money, headaches, and even misdiagnoses.

- ✓ We guide physicians and practitioners through the x-ray purchasing process.
- ✓ We certify medical personnel to shoot x-rays in some states.
- ✓ We train staff to achieve optimal, diagnostic x-ray images.
- ✓ We retrain staff on equipment and software.
- ✓ We do not sell equipment, but we can guide you all the way through.

WHAT WE OFFER

We can fast track your staff level 1 radiation safety (and we'll document it for you!), and we can even provide certification courses live at your facility(s). Whatever your needs are, or if you are unsure, simply call or email us and we'll help you get things straight.

Digital X-ray System Coaching & Consultation

Technique Chart Development Guide

State X-ray Certification courses & Mandatory Re-certification Class

X-ray Positioning & Technique Course

The x-ray industry can be highly enigmatic and mysterious. Many doctors and administrators are left holding the bag when trying to research how to upgrade their systems. Let us make it easy for you. Don't purchase a system that you will regret from day one because you didn't know what questions to ask! Let us empower you to feel good about your decision and limit the chances of regretting your purchases.

Whether you have purchased a new digital system or you have a new employee that needs to be trained on your system, we'll train your staff on appropriate operation of digital modalities and software. We work with staff to learn x-ray machine operation, digital x-ray, and c-arm operation. We'll provide documentation as proof of your training.

Get certified as a basic x-ray operator in your state. Our courses comply with state minimum requirements for non-rad tech certifications. States we currently serve are:

Alabama | Georgia | North Carolina

Please contact us if you have questions regarding your state certification qualifications. The following courses are now pending **Alaska, New York, New Jersey, Missouri**.

We'll ramp your staff up to speed with easy to understand videos and coursework that will guide them through the whole process of various examinations, techniques and department management. Empower your employees as leaders in the radiology department by exposing them to principles that every department employee should know.
